

1. List the source of and describe at least 1 potential data sets(8 total points)
2. Identify who your customer/s would be (8 total points)
3. Describe the problem that the proposed project solves and justify its need (10 total points)
4. State the product vision and how your web based project would be useful to society (8 points)
5. Identify the major features of each of the proposed projects (12 total points)

Ideas

1. WHO (World Health Organization) — Open data repository, diseases that are contagious near you. The customers would be anyone who goes out in public and is interested in seeing if there are any diseases or sicknesses in their area that they should know about and be cautious of. If you have a family member that is easily susceptible to illnesses this would help because you will know what illnesses are in your area. There might be an outbreak of an illness in your area so you should be made aware so a website could help that has a map of your city. The map will show certain illnesses in your area but never give names or addresses out. It is just to be used for the safety of yourself and others.
2. World Bank Open Data- With this open source you could create a website that shows you what the expenses are like in other countries. It would be helpful for people that are interested in traveling to other countries or even moving to another country. The website would generalize and do what-if scenarios to show you how much money you would be spending each day and compare it to how you live now.
