   One potential data set could be the reliance of clean fuels in every country for cooking.

2) The customer would be countries or companies in the clean energy industry.

3) The problem that this would solve would be the lack of clean energy being implemented and determining where companies and other countries should look at for ideas and solutions that they can implement in their own countries.

4) The product vision would be to offer a data analysis of the reliance of clean fuels of different countries so that other countries can see the impact of different solutions and determine where they should look at. This is needed because we need to stop using fossil fuels as our climate is deteriorating.

5) A major feature of this project would be for the user to see which countries had the highest increase of clean fuel use from year to year.
