Eshetu Wekjira

Product idea:

List the source of and describe at least 1 potential data set https://www.who.int/data/gho/data/indicators/indicator-details/GHO/gho-phe-primary-reliance-on-clean-fuels-and-technologies-proportion WHO(World health organizations) provided an open dataset that related clean fuels and technologies for cooking.

Identify who your customer/s would be – companies or individuals are interested in the countries that need to work on clean fuels to reduce indoor air pollution.

Describe the problem that the proposed project solves and justify its need. There is carbon emission, an environmental issue right today, and limited energy sources in countries; how each country keeps sustainable development and aims to ensure affordable, reliable, modern energies by easily tracking data and visualizing.

State the product vision and how your web-based project would be useful to society- The customer would be anyone who wants to use clean fuel energy for cooking, keep their environment sustainable, and reduce global warming and carbon emissions. Sustain our environment by using clean fuel with technologies is the key benefit of our websites. Our product uses technology, visualizes data, and identifies which countries need more clean energy and which countries use less clean fuel.

 Identify the major features of each of the proposed projects – the major feature is a user chooses a country and metric how they use and compare between different countries and quickly view the differences.
